

Additional Features

I planned to make the website more interactive. User can get more careful details with intuitive methods in a comfortable pace.

- Alert as an introduction to every page.
- Random quote of famous in WW2.
- Virtual magnifying glasses in solders page.
- Geolocation to get users' positions.

Evaluation

I add an alert system to every single page when user open it, it is a hint to tell them can get a way to see expand content.

In the home page I add an place to show the quotes by the famous people in WW2. That makes the home page more interesting and I put a button under it which you can tab to change the quote randomly. I also made it won't show the

same quote over and over again for a short time by improving the JavaScript. Now it is more reasonable.

In the soldier page I reformat everything now the picture and text won't go wrong when people changing the scale(But I still suggest to go with default scale). The biggest change here is the magnifying glass system. There are 3 virtual magnifying glasses on the soldier picture that you can use them to see the detail just like in real world. Magnifying glasses can also be used for interactivity and visual effects in web design. Through the special effects of the magnifying glass, web pages can be made more dynamic and compelling, thus improving user experience and attractiveness.

In the suggestion page I tried to make it more funny so I use the geolocation technique to get your position. That just matches the background picture which is a telegraphist.

Test

The responsive of my website is kind of nice. I tested them by various ways like running and amending the pages again and again, especially the random quote display and the magnifying glasses. I tested and fixed so many times and now they can run stably.

The quote part on index page also faced some weird problems when I test. I tried make people won't get same quotes repeatedly, but it still goes run sometimes when user clicks the button with a high speed.
